<i>NASA College</i>	May, 2020 - May, 2022

## PROJECTS

---

### Hike Gear Nepal

Hike Gear Nepal is a web-based platform designed to support trekkers and hikers in Nepal by providing a one-stop solution for all their trekking equipment needs. The website aims to make trekking gear more accessible and affordable by offering both new and second-hand products for rental options . The Website is Built using HTML, CSS and JavaScript for Frontend and PHP for Backend . MySQL for Database .

<https://github.com/Miharth/Hike-Gear-Nepal>

### Amazon

The Amazon Frontend Clone is a responsive replica of the Amazon e-commerce website's user interface. Built using HTML, CSS, and a touch of JavaScript, this project demonstrates a strong understanding of layout design, component structure, and UI/UX best practices. It replicates the look and feel of Amazon's homepage experience.

<https://github.com/SidharthaSahani/Amazon-Clone>

### Simon game

Built a simple Simon Game using HTML, CSS, and JavaScript. It's a fun little memory game you start by pressing any key, and the game lights up a colored button. Your job is to remember the pattern and click the same buttons in the right order. With each round, the pattern gets longer. If you make a mistake, the game resets. The challenge is to see how far your memory can take you!
